

SALAHALDIN MOHAMED SALAHALDIN ABDALLA

Computer Science Engineer | Full Stack Developer | Mobile Developer | Cybersecurity

Egypt | 29DevSalah@gmail.com | +20 10 3782 8139 | salahaldin-portfolio.vercel.app | linkedin.com/in/salahaldin291 | github.com/29SalahMo

Education

BSc Computer Science — University of Greenwich, UK (Dual-Award with MSA University, Egypt)

Jan 2026

- Distinction, Final Year Project — AI-powered text summarization system (NLP)

Technical Skills

Languages: JavaScript (ES6+), TypeScript, Python, PHP, C#, SQL, HTML5, CSS3

Frontend & Mobile: React.js, Next.js, Vite, Tailwind CSS, Framer Motion, Radix UI, React Three Fiber, Three.js, React Native, Expo, NativeWind, Zustand

Backend: Node.js, Express.js, NestJS, Fastify, REST APIs, Socket.IO, Zod, Stripe, WhatsApp Cloud API

Databases & ORM: MySQL, PostgreSQL, MongoDB, Redis, Prisma ORM, TypeORM, Sequelize

Auth & Security: JWT, Passport.js, Bcrypt, RBAC, Input Validation, HCIA-Security

DevOps, Tools & AI/NLP: Docker, Docker Compose, Git, GitHub, Linux, Swagger / OpenAPI, HuggingFace Transformers, SentenceTransformers

Projects

AI Text Summarizer — Graduation Project (NLP • HCI • Full Stack)

2025 – 2026

- Architected an end-to-end NLP web application for abstractive text summarization, applying HuggingFace Transformer models to condense long-form content into concise, high-quality summaries
- Implemented sentence-level semantic similarity scoring with SentenceTransformers to rank and extract the most meaningful content from source documents
- Designed an accessible, real-time-feedback UI for non-technical users and built a Flask REST API to serve summarization requests, achieving a Distinction grade for technical depth and execution

Technologies: Python, Flask, HuggingFace Transformers, SentenceTransformers, REST API, HTML/CSS/JS

Egyptian Restaurant Management System (Cafes System) — Full-Stack, Production-Grade

2024 – 2025

- Built a multi-role restaurant platform spanning POS, Kitchen Display System (KDS), an admin panel, and a customer-facing interface across 4 distinct user roles using NestJS, TypeORM, and Next.js
- Implemented Role-Based Access Control (RBAC) and JWT authentication via Passport.js, and integrated real-time kitchen order updates with Socket.IO
- Containerized the full stack — frontend, backend, and database — with Docker Compose for one-command deployment

Technologies: NestJS, TypeORM, JWT, Passport.js, Socket.IO, Fastify, Next.js, TanStack Query, Zustand, Docker, Docker Compose

CyBRD — Cyberpunk Storefront & Backend (Full-Stack, E-Commerce)

2024 – 2025

- Developed an immersive cyberpunk-themed e-commerce storefront with interactive 3D product elements using React Three Fiber and Drei
- Built a secure Express/Node.js backend with Prisma ORM, integrating Stripe payments, rate limiting, and full Swagger API documentation
- Applied advanced motion design with Framer Motion to deliver a high-end, animation-driven shopping experience

Technologies: React, Vite, TypeScript, Framer Motion, React Three Fiber, Node.js, Express, Prisma, Stripe, Swagger

Additional Projects

- **Egypt Supermarket Management System:** Built a full-stack, localized supermarket platform covering inventory, POS, customer and supplier management, and reporting with RBAC and i18next Arabic support (React, Node.js, Express, PostgreSQL, Redis, Docker Compose) — 2024
- **Backend Pro — Educational Mobile App:** Built a cross-platform React Native app for backend engineering learners with progress tracking, push notifications, and offline persistence (React Native, Expo, TypeScript, Zustand, AsyncStorage) — 2024
- **Mataam Pro — Restaurant Management PWA:** Built an offline-capable Progressive Web App with reusable Radix UI components and TypeScript-validated forms (React, Vite, TypeScript, Tailwind CSS, React Hook Form) — 2024

Certifications

- HCIA-Security V4.0 (45 Hours), Huawei / ICT Talent Bank — Jul 2024; Introduction to MongoDB, Mahara-Tech (ITI Platform) — Dec 2023 | Languages: Arabic (Native), English (Professional Working Proficiency)
